António Guedes da Cunha

Former Chief Mechanical Engineer at FSFEUP
Propulsion Engineer at Tekever

Recommendation Letter to Miguel Monteiro

To Whom It May Concern,

It’s an honor to recommend Miguel Monteiro. I had the opportunity to follow and review his technical and leadership development directly from late 2023 to the summer of 2025, at Formula Student FEUP. It was a unique and enriching experience to see his personal evolution and contributions to the project, which were important for the team to achieve the cycle's competitive goals.

From initial onboarding to the final technical deliverables for the frame at the international competition, Miguel showed a clear ability to plan and prioritize work to meet deadlines and a strong understanding of the requirements needed for the system to function as intended. His versatility and proactivity were decisive for the three podiums (two of which represented overall first places) achieved in the first year of the team cycle, in which Miguel went beyond the technical duties to develop a European-winning Business Plan Presentation and a Cost and Manufacturing Event.

As for the manufacturing year, his hard work paid the team a great tribute by completing a critical path system: the chassis. This was more than an agile coordination of team manufacturing sponsors' and team members' schedules. It was also the theoretically correct design of the system and auxiliary systems required for its assembly, within team constraints such as budget and timeline.

In terms of competitive performance and the skill to prepare a system to the limit, the rigour that Miguel placed in the preparation of the Mechanical System Technical Inspection not only ensured that the team was approved in every international competition it participated in, but also that it was the first to conclude this detailed inspection in the Portuguese competition.

In conclusion, and recalling the first statement of this letter, I confidently recommend Miguel, not only because of what he has already done, but for having learned that he proactively and efficiently contributes to the projects that he commits to and, more importantly, develops himself to contribute even more.

With the best regards,

António Manuel Sampaio da Mota Guedes da Cunha
