Recommendation Letter for Miguel Monteiro

To whom it may concern,

It is with great pleasure that I recommend Miguel Monteiro, whom I have mentored and worked with from January to June 2025 due to his Bachelor Thesis at Adamastor. Since then I have accompanied him closely due to his work at the Formula Student FEUP team, collaborating directly with him to coordinate manufacturing.

During my period mentoring – and later working with him – Miguel demonstrated exceptional technical autonomy, responsibility, and engineering maturity. Out of his own accord, he manufactured test specimens, defined production processes, managed the team's inventory and created new workflows of his own initiative. Furthermore, during his Bachelor's thesis – which focused on the structural behavior of sandwich panels – Miguel maintained rigorous technical communication with me regarding manufacturing techniques for composite monocoques and embedded inserts design, successfully refining his designs based on production and structural feedback.

Miguel combines a strong work ethic with a proactive mindset and deep hands-on expertise in composite structures. He would be a tremendous asset to any research institution, engineering team or advanced technology project.

Sincerely,

Frederico Ribeiro
Engineering Director
